## Product Description

AutoCache service for WorkSite 8.0 provides the ability to populate a WorkSite cache based on information in the document profile. It allows the user to specify the profile fields and caches all documents that match those fields at a convenient, user-specified time — saving both time and bandwidth.

Alternatively, the service provides intelligent pre-caching of documents related to matters that are being actively updated. It can keep track of matters that are being accessed and pre-cache all documents related to those matters.
