Product Description

The Younts' Document Unlock utility will allow Non-Administrative users the ability to "unlock" documents that they do not have full rights to. This is an ideal solution for Helpdesk personnel who currently have no method of Unlocking a document to which they do not have Full Access. With Document Unlock, Non-Administrative users will have the ability to unlock documents by right clicking on the document; or, if they have no access to a document, are able to choose a database, document number, and version.

Document Unlock is a useful utility for Help Desk users (users do NOT need to be members of NRTadmin group).

Supports iManage WorkSite FileSite 8.x and DeskSite 8.x.

Updates to the utility include a change in the way it detects users. DocUnlock will no longer count virtual users as active users – eliminating associated issues.
